Strategy: The resistance range ceiling, which lies between 78,100 and 78,500, led to induced pressure and a negative market close. The current chart pattern suggests another potential attempt to break through this resistance zone. If the market surpasses 78,500, we expect it to rise further towards the next resistance level, situated between 78,800 and 78,900. Immediate support is now between 77,600 and 77,440, which also serves as a crucial support level. If this support level fails, further price declines towards 77,300 to 77,000 are possible. The critical support level is between 77,300 and 77,000, and closing below this range could signal the beginning of a more significant downturn.
